PROFESSIONAL SUMMARY

Results-driven Front-End Developer with 2+ years of experience building production-ready web applications. Proficient in JavaScript, TypeScript, React.js, and Next.js, with a strong track record of delivering high-performance, accessible, and scalable UI systems. Currently expanding into full-stack development with Node.js and Supabase, while actively shipping AI-powered SaaS products as an indie developer. Passionate about combining technical depth, creative problem-solving, and emerging AI tooling to build impactful products one release at a time.

PROFESSIONAL EXPERIENCE

Front-End Developer | Nexapay Nov 2025 – Present

Ondo, Nigeria • Remote

- ▶ Developed and maintained responsive user interfaces using React.js, TypeScript, HTML5, and CSS3, directly contributing to product features used by live customers.
 - ▶ Architected and shipped reusable, accessible UI component libraries aligned with design system specifications, reducing future development time by an estimated 30%.
 - ▶ Integrated RESTful APIs to enable dynamic data rendering, real-time state updates, and seamless backend-to-frontend interactions.
 - ▶ Identified and resolved critical front-end performance bottlenecks, improving page load times and application stability across key user flows.
 - ▶ Collaborated cross-functionally with designers, backend engineers, and product stakeholders in an Agile environment to deliver features on schedule.
-

FEATURED PROJECTS

onePost — AI Content Repurposing SaaS | Next.js 14, TypeScript, Groq API, Supabase, Stripe, Tailwind CSS

- ▶ Designed and built a full-stack SaaS platform from zero to deployed product, enabling content creators to transform long-form content into platform-optimized posts for LinkedIn, Twitter/X, Instagram, TikTok, newsletters, and SEO — in under 10 seconds.
- ▶ Engineered an AI repurposing engine using the Groq API (Llama 3.3-70B), writing platform-specific prompt strategies that produce context-aware, tone-matched output per social platform.
- ▶ Built a Custom Tone Profiles system where Pro users define their personal brand voice — the AI studies their writing style and matches it across all outputs, significantly improving content authenticity.
- ▶ Implemented a complete SaaS monetization stack: Stripe subscriptions with webhook-driven plan enforcement, credit-based usage limits per plan tier, and automated billing lifecycle management.
- ▶ Integrated YouTube transcript extraction and blog URL content scraping to support diverse input sources beyond plain text paste.
- ▶ Deployed to Vercel with Supabase (PostgreSQL + Auth + RLS) as the data layer, achieving sub-200ms API response times in production.

Live: one-post-rho.vercel.app

Trading Journal & Strategy Marketplace | *Next.js, Supabase, Paystack, Tailwind CSS*

- ▶ Engineered a full-stack FinTech marketplace enabling traders to list, sell, and independently track performance metrics for algorithmic and manual trading strategies.
- ▶ Integrated Paystack API for secure payment processing, implementing webhooks with HMAC signature verification to automate order fulfillment and enforce revenue-splitting logic.
- ▶ Developed a Digital Asset Gating system using Supabase Private Storage and time-limited Signed URLs, ensuring paid content (PDFs, indicators) remains exclusively accessible to verified buyers.
- ▶ Built dynamic performance dashboards calculating real-time PnL, Win Rate, and Expectancy by aggregating trade data through optimized PostgreSQL relational queries.

Task Management App | *React.js, IndexedDB, Service Workers*

- ▶ Built a productivity-focused task management application with full offline capability using Service Workers and IndexedDB for client-side persistence — ensuring zero data loss without network connectivity.

Automated File Management System | *Python*

- ▶ Developed a Python automation tool that intelligently organizes, renames, and manages files based on type, date, and custom rules — eliminating manual file management overhead.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python

Frameworks & Libraries: React.js, Next.js 14 (App Router), Tailwind CSS, Framer Motion, Node.js

Backend & Database: Supabase (PostgreSQL, Auth, RLS, Storage), REST APIs

AI & APIs: Groq API (Llama 3.3), Anthropic Claude API, prompt engineering, AI-powered product development

Payments: Stripe (subscriptions, webhooks, billing portal), Paystack (webhooks, HMAC verification)

Dev Tools: Git/GitHub, Vercel, VS Code, Trello, Component-driven architecture

Other: Performance optimization, responsive UI design, web accessibility (WCAG), SaaS product development

EDUCATION

Bachelor of Science, Computer Science²⁰²⁵

Landmark University, Omu-Aran, Nigeria
